Part II: Certification

Country: NORWAY

Health certificate to: AUSTRALIA

<table>
<thead>
<tr>
<th>II.a. Certificate reference number</th>
<th>II.b. Replacement certificate reference number</th>
</tr>
</thead>
</table>

I, the undersigned Official Veterinarian, certify that:

1. During the period between the first and last semen collection for this consignment, the donor(s) lived in Norway which was recognised by the Office International des Epizooties (OIE) as free from foot and mouth disease (FMD) where vaccination is not practised and met the OIE Code Article definitions of country freedom from:
   - vesicular stomatitis
   - rinderpest
   - contagious bovine pleuropneumonia
   - lumpy skin disease
   - Rift Valley fever
   - epizootic haemorrhagic disease of deer [meeting the same requirements of disease freedom that apply to bluetongue]

2. The semen was collected, processed and stored in accordance with Council Directive 88/407/EEC.

3. Bluetongue (BT)
   Prior to the export of this consignment each semen donor fulfils following requirement:
   a)  A competitive enzyme linked immunosorbent assay (cELISA) for antibody to the bluetongue virus group on a blood sample, with negative results, at least every 60 days throughout the semen collection period and between 28 and 60 days after the final semen collection for this consignment.

   OR
   • An agent identification test for bluetongue virus on blood samples drawn from each donor at commencement and conclusion of, and at least every seven days (virus isolation test) or at least every 28 days [approved polymerase chain reaction (PCR) test] during semen collection for this shipment, with negative results.

   b)  Donors vaccinated against BTV: Yes ☐ / No ☐

4. Schmallenberg virus
   Prior to the export of this consignment each semen donor fulfils following requirement:
   •  For semen collected on or after 1 June 2011, a virus neutralisation test (VNT) or approved indirect ELISA for antibody to the Schmallenberg virus on a blood sample collected

   EITHER:
   - between fourteen (14) and sixty (60) days after last collection of semen from the donor for this consignment with negative results

   OR
   - between (14) and sixty (60) days before first collection of semen from the donor for this consignment with positive results

5. Each donor showed no clinical signs of Johne’s disease (M. paratuberculosis) during the collection period.

6. An approved veterinarian
   • ensured the isolation of the donors from all other ruminants not of equivalent health status prior to semen collection,
   • supervised the isolation period,
   • supervised the collection and processing of the semen in accordance with the standards laid down in Council Directive 88/407/EEC and updating legislation,
   • ensured that suitable antibiotics were added to the diluents and that diluents were prepared in accordance with the standards laid down in Council Directive 88/407/EEC and updating legislation, and
   • verified the permanent identification of the semen straws with the identification details of the donor and date of collection or a code from which this information could be determined.
7. Sex sorted semen

EITHER
• Sex sorted semen is NOT included in this shipment
OR
• Sex sorted semen IS included in this shipment, and:
  - equipment used for sex-sorting sperm was cleaned and disinfected between animals according to the sex semen licensor’s recommendations;
  - where seminal plasma, or components thereof, was added to sorted semen prior to cryopreservation and storage, it was derived from animals of same or better health status.

8. Storage at Approved Centre(s) of Laboratory(ies)

From the time of collection until export, the reproductive material in this consignment was stored:
• In sealed containers (e.g. straws, ampoules or vials) and identified in a legible and non-erasable manner as specified in this veterinary certificate
• Only with other embryos or semen collected for export to Australia, or of equivalent health status
• In a secure place within an approved centre or laboratory and under the supervision of the Approved Veterinarian(s), and
• In containers containing only new unused liquid nitrogen.

9. Further processing or aggregation

For this reproductive material,
EITHER:
• After leaving the approved centre under seal in shipping containers (liquid nitrogen shippers/tanks), the reproductive material was NOT removed from sealed containers (e.g. straws, ampoules or vials) for further processing or removed from the shipping container(s) for aggregation with other reproductive materials.
Or
• Reproductive materials was shipped to another approved centre or laboratory under seal in shipping containers (liquid nitrogen shippers/tanks) and removed from sealed containers (e.g. straws, ampoules or vials) for further processing (e.g. sex sorting) or for aggregation:
  - with other reproductive material collected for export to Australia, or of equivalent health status
  - at an approved centre or laboratory and
  - under the supervision of the Approved Veterinarian(s).

10. Shipping container (Liquid nitrogen shippers/tanks)

EITHER
• The shipping container was new
OR
• Prior to loading, the shipping container was emptied and inspected and any loose straws removed. The shipping container, including all surfaces in contact with the straws, ampoules or vials was then disinfected with one of the following disinfectants: 2% available chlorine (e.g. chlorine bleach), 2% Virkon or irradiated at 50kGy.

Date of disinfection/ irradiation: _______________________________________________________________________________________
Disinfectant used/ active ingredient: ____________________________________________________________________________________

11. Official Government Seals

Under the supervision of an Official Veterinarian prior to export to Australia:
• The containers (e.g. straws, ampoules or vials) for reproductive material in this consignment were checked as being sealed.
• The identity of the reproductive material was checked prior to being placed into new, unused liquid nitrogen in a shipping container for export that was new or disinfected as specified in this veterinary certificate.
• Only reproductive material that met Australian import conditions was added to the shipping container.
• The shipping container was sealed with an official government seal and the number or mark on the seal recorded on the certificate.

Official veterinarian:
